

A Series Eccentric Disc Pump

Exceptional Self-Priming Capabilities

The design of the A-Series pumps, utilizes an eccentric disc according to the Mouvex principle, this enables self-priming, even when dry, and pipe clearing.

Legendary ruggedness

The A Series pumps maintain their initial performance level over time without any adjustment thanks to the automatic clearance make-up system.

Unchanging characteristics

Even if the viscosity of the fluid changes considerably, the A Series pumps maintain a regular and constant output, independent of the delivery pressure.

Practically unlimited scope of application

A Series pumps are perfectly adapted to the transfer of fluid whether it be viscous, non lubricating, volatile or delicate (no shear effect).

Options

- Double bypass for protection when operating in both directions.
- Heating or cold jacket for transferring products that can solidify at ambient temperature.

PROVEN PERFORMANCE

ATEX certified
II 2 G II B T2, T3, T4, T5

(according to pumped product temperature)

Can run dry in ATEX environment.

Flow rates up to 55 m³/h (242 gpm)

A Series Eccentric Disc Pump

Reversibility

The unique design of the A Series pump allows the unit to be continually run in reverse. This enables pumping back of products.

Excellent efficiency

The unique eccentric disc principle ensures a smooth transfer (low rotary speeds) as well as excellent efficiency.

Construction

Casing: Ductile iron

Bushing: Carbon or bronze (5 bar max.)

O-rings:

- FKM
- FEP-FKM

Mouvex Mechanical Seals:

- Carbon / stainless steel
- Tungsten carbide / tungsten carbide

Standardized Mechanical Seals:

- According to manufacturer

Mouvex Technology

Eccentric disc pumps consist of a cylinder and pumping element mounted on an eccentric shaft. As the eccentric shaft is rotated, the pumping element forms chambers within the cylinder, which increase in size at the intake port, drawing fluid into the pumping chamber. The fluid is transported to the discharge port where the pumping chamber size is decreased. This action squeezes the fluid out into the discharge piping.

Mouvex Principle

Applications

Since 1965, these workhorse transfer pumps have earned a strong reputation in some of the harshest applications in the world. Now, these pumps have expanded their capabilities to serve more markets and a wider range of industrial applications:

- **Energy:** Fuels, Gasoline, Diesel, Jet, Avgas, LFO, HFO, Biodiesel, Bioethanol, Lubricants, Mineral and Synthetic oils, Greases
- **Chemical Industry:** Paint, Varnishes, Solvents, Resins, Methanol, Ethanol, Additives, Various chemicals
- **Food Industry:** Cooking oils, Animal fats, Vegetable fats, Cocoa butter, Molasses, Alcohols

Performance Data

		AZ	AD	A6	A12	A18	A31	A55
